

1. Is the Python Standard Library included with PyInputPlus?

Ans:- No, the Python Standard Library does not include PyInputPlus. It is a separate module that you need to install

2. Why is PyInputPlus commonly imported with `import pyinputplus as pypi`?

Ans:- PyInputPlus is commonly imported with `import pyinputplus as pypi` because it allows you to use a shorter name when calling the module's functions

3. How do you distinguish between `inputInt()` and `inputFloat()`?

Ans:- `inputInt()` and `inputFloat()` are both functions in PyInputPlus used for taking integer and floating-point inputs respectively. `inputInt()` accepts an integer value and returns an integer, while `inputFloat()` accepts a floating-point numeric value and returns a float

4. Using PyInputPlus, how do you ensure that the user enters a whole number between 0 and 99?

Ans:- To ensure that the user enters a whole number between 0 and 99 using PyInputPlus, you can use the `inputInt()` function with the `min` and `max` parameters set to 0 and 99 respectively

5. What is transferred to the keyword arguments `allowRegexes` and `blockRegexes`?

Ans:- The keyword arguments `allowRegexes` and `blockRegexes` in PyInputPlus accept a list of regular expression strings. `allowRegexes` allows inputs that match any of the provided regular expressions, while `blockRegexes` blocks inputs that match any of the provided regular expressions

6. If a blank input is entered three times, what does `inputStr(limit=3)` do?

Ans:- If a blank input is entered three times, `inputStr(limit=3)` will raise a `RetryLimitException`

7. If blank input is entered three times, what does `inputStr(limit=3, default='hello')` do?

Ans:- If a blank input is entered three times, `inputStr(limit=3, default='hello')` will return the default value 'hello'
